

Based in the UK, Avoco Identity builds and implements cloud-based identity assurance platforms for public and private sector organisations around the world, enabling them to provide their stakeholders with verified user-centric identities that can be used to access online services. Avoco's state-of-the-art solutions drive down the cost of providing identity and verification services and enable organisations to build strong customer and citizen relationships. Its products are inbuilt to national online government services, where they combine ease of use with strong identification, security and privacy.

iSAML in Production

Avoco iSAML identity platform as a nerve centre for IDaaS

Verified identity for everybody

The following diagram shows an in production example of our IdP as a nerve centre for an identity as a service system. This particular system services a number of lines of business offered through the UK Government Skills Funding Agency.

- Verified identities issued using both online or offline verification services to allocate level of assurance 1 or 2
- Single sign on and single logout of services
- Extensively tested over 10,000 hours
- Integration with number of customer contact points
- Highly scalable to millions of users
- State of the art security features built in
- Citizen-centric features configurable by business rules
- Full audit capability and administration
- Help desk module
